

Aeronautical Law

Content

We have extensive experience advising foreign airlines to enter the Colombian market, in particular carrying out the procedures for registering and obtaining operating permits for regular routes and non-scheduled flights, as well as litigation arising from the exercise of aeronautical activities in Colombia.

Aeronautical law focuses on the procedures necessary to constitute and/or obtain the necessary permits for airlines to operate legally in Colombia.

We seek to support our clients in the following:

-  Incorporation of companies and obtaining operating permits.
-  Process of requesting new routes nationally and internationally.
-  Advice on aircraft purchase or lease, registration and insurance.
-  Attention to passenger complaints before the Civil Aeronautical Authority and the Superintendence of Industry and Commerce.
-  Attention of requirements by the Colombian and foreign aeronautical authorities.

Questions

-  Requirements by the aeronautical and governmental authorities for an airline to operate in Colombia or maintain its functioning and operating permits.
-  How to protect the fulfillment of aircraft purchase or lease contracts.
-  How to meet the different requirements in case of complaints from users and/or passengers due to problems in schedules, with personnel or luggage.
